

Hamilton Pro-Tex

Hamilton Drywall Products Pro-Tex is a polystyrene-based aggregate ceiling texture. When sprayed it produces a white, medium texture finish. Pro-Tex mixes very easily without lumps; it sprays and atomizes very easily, and provides high coverage. Pro-Tex can be applied to a variety of properly prepared substrates including drywall, plaster and concrete.

Job Conditions: Maintain a minimum air, surface and texture material temperature of 10° C (50° F) for 48 hours prior to application and until completely dry and stable.

Surface Preparation: All surfaces must be firm, clean, dry and free of foreign substances. The absorption rate of the surface that Pro-Tex is applied to may cause variation in the texture pattern. **NEW DRYWALL** should be primed with one or more coats of Hamilton's Prep-Tex Plus prior to texture application. Paint must be completely dry prior to texture application. **CONCRETE** surfaces must be aged at least 60 days prior to texture application. Particular caution should be exercised to determine the presence of efflorescence, dirt, dust, grease, separating and/or bond breaking agents, or a latent layer of cement. After removal of any of the foregoing, any irregularities in the concrete surface should be filled and smoothed with the appropriate Hamilton products.

Mixing: In a clean container mix mechanically with approximately 14 litres of clean water per 15 kg bag. Slowly add powder to water and continue mixing until mixture is free of lumps. Re-mix after 10-15 minutes, adding more water as required. Use mixed material within 24 hours.

Application: For interior use only. This product can be sprayed with a hand held hopper, stator tube or pressure pot machine.

Coverage/Yield: Approximately 33-42 square meters (355-450 square feet) per 15 kg bag. Approximate yield per 15 kg bag – 35 litres.

Storage/Shelf Life: Rotate inventory regularly and store in a dry and low humidity environment.
